If you believe that, or think that other people believe and accept that, of course you'd want to challenge it. Interesting but didn't manage to deliver the philosophical depth I was looking for. Latour spent 21 months as a participant-observer in a neuro-endocrinology lab, and from his time develops a comprehensive picture of the scientific process as an act of rhetorical destruction--eliminating alternatives until only one is left, scientists as economic-strategic actors seeking to increase their stock of 'credit' in the community, and science as a difficult struggle to make Order out of Chaos.

Laboratory Life: The Construction of Scientific Facts

Knowledge is thus made by people drawing on available cultural material, not preexisting facts in a world outside of human action, waiting to be uncovered.

Social Construction of Scientific Knowledge

What do I like about Woolgar and Latour's account? Incoherence of narrative this was intended they say 2.

Reflexivity: Observers are engaged in methods that are similar to those who they study 5.

Laboratory Life: Does Science Discover Facts or Construct Them?

It's just as much a soap-opera as any other big industry. Princeton : Princeton UP , 1986.

Laboratory Life : The Construction of Scientific Facts (Edition 2) (Paperback)

The massive number of alternative readings creates background noise. What we count as knowledge is dependent on, and shaped by, the contexts in which it is created.

Laboratory Life : The Construction of Scientific Facts (Edition 2) (Paperback)

Woolgar and Latour expect to be annoying, but not for the reasons they think.
