Enhancing adult therapeutic interpersonal relationships in the acute health care setting: an integrative review

Effective communication is a skill all healthcare professionals need, but one that not all are naturally good at. Given these challenges, humor was identified in the review of the literature as a means to enhance therapeutic interpersonal relationships. The National Commission for Allied and Healthcare Professions Bill, 2020

The review is limited to the adult population, and consequently experiences and strategies to enhance therapeutic interpersonal relationships concerning the pediatric and adolescent population are not represented. Lees et al found that therapeutic interpersonal engagement between nurses and patients for suicidal crisis intervention was the central tenet in quality of care.

Therapeutic communications for health professionals

Try to use language that is simple, clear and non-threatening, while staying honest and true. This communication skills guide to practice will explore several common communication scenarios that you may find yourself in, and help you navigate and master each interaction you have in your day-to-day practice.

Communication Skills in Healthcare: A Guide to Practice

Background History Update and discuss relevant medical and support information. Two studies, employed mixed methods including questionnaires, observations, and interviews; and one study had a qualitative design with a pre- and postintervention questionnaire.
