## Research on geometric features of phase diagram and crack identification of cantilever beam with breathing crack

In particular, the retarder element may include a stacked structure including first and second chiral liquid crystal layers of opposite handedness.

It follows that the first bandgaps of these four systems remain topologically identical. In our system, there must be an interface mode with a frequency inside the second common bandgap at the boundaries separating S1 and S2, and S3 and S2, which differ in their topological properties.

Henri Poincaré, the sphere dude. The reactions can be inferred. In some embodiments, the retarder element may include first and second retardation regions positioned side-by-side or concentrically in a coplanar arrangement.

Furthermore, the practical limitations the size and f-number the ratio of the focal length to the diameter of a lens possible for microlens arrays often limit performance or increase cost.

The resulting output was linearly polarized with approximately 72% correct polarization, with a spatial profile shown in FIGS.

When embodiments of the present invention are used as a frontlight for a reflective flat-panel-display, the frontlight may efficiently provide brighter illumination to the display, augmenting the light received from the ambient environment, while also reducing or avoiding degradation of the contrast ratio.
