Infectious Diseases Challenges: Epidemiology and Control

The health authority shall investigate each report of a case having cryptosporidiosis, identified by the detection of oocysts in fecal smears or of the life cycle stages of the parasites in intestinal biopsy specimens upon testing by a medical laboratory, to: a Confirm the diagnosis; b Identify any contacts; c Identify the source of infection; d Determine if the case is employed in a sensitive occupation or is a child attending a child care facility; and e Determine if there is a contact residing in the same household as the case who is employed in a sensitive occupation. The health authority shall investigate each report of a case having respiratory syncytial virus infection, as identified by the finding of respiratory syncytial virus in clinical specimens or by demonstration of a specific serologic response in acute and convalescent sera upon testing by a medical laboratory, to: 1.

Control of Communicable Diseases Manual — Википедија, слободна енциклопедија

When an association is suspected among two or more cases described in subsection 1, the health authority shall conduct an investigation to determine whether there is a common source of infection. Added to NAC by Bd. The health authority shall notify the Chief Medical Officer if the source of infection is suspected to be an infected animal.

Control of Communicable Diseases in Man

Upon approval by the health authority and within available appropriations, the State Public Health Laboratory shall provide testing for communicable diseases at no charge to a case, suspected case, carrier, health care provider, medical laboratory or health authority. External students: This course is available fully online for external students.
