## Pressure Testing and Lay

. Refer to the list given below for the types of inspection performed on a pipe.

## Texas Pipe Inspection Certification

An isolation valve shall be provided between the pressure testing manifold and the system being tested.

## Golden Welds and Pressure Test

A request of NDT in lieu of pressure testing is processed as detailed b. Of course this is on ID's that are tricky to access. The instrument air system shall be service tested with instrument air.

## Testing and Inspection of Welds

A closure weld is a final weld connecting piping system or component that has been successfully leak tested. Use separate proportioning pumps for each chemical to avoid adverse reactions.
