

# Clinical application of current techniques and treatment in cardiology

S. Karger - Pharmacy

Description: -

-  
Heart -- Surgery -- Congresses.  
Heart valves -- Diseases -- Congresses.  
Heart -- Abnormalities -- Congresses.  
Coronary heart disease -- Congresses. Clinical application of current techniques and treatment in cardiology

-  
v. 17

Advances in cardiology ; Clinical application of current techniques and treatment in cardiology

Notes: Includes bibliographies and index to v. 1-16 of the series.

This edition was published in 1976

Filesize: 48.63 MB

## Point

Both on a national and international level there are many collaborations and many staff members are active within the national and international groups involved. The search for non-invasive techniques to assess cardiac allograft function is a high priority objective for heart transplant professionals. Vahid Serpooshan, PhD Wallace H.

## Cardiology, Cardiothoracic Surgery and Vascular Surgery

Myocardial scar detected by contrast-enhanced cardiac magnetic resonance imaging is associated with ventricular tachycardia in hypertrophic cardiomyopathy patients. Hot balloon angioplasty, laser thermal angioplasty, excimer and holmium laser utilization, transmyocardial laser revascularization are described as high power techniques.

## Lipoprotein(a) in Clinical Practice

The translational focus on inflammation and proteases is shifting towards the role of impaired repair fibrosis in perpetuating the disease.

## Current Challenges in Noninvasive Radioablation of VT

Cardiovascular magnetic resonance, fibrosis, and prognosis in dilated cardiomyopathy. Other important activities involve the participation in the NVVC-Connect Heart failure program. Gadolinium cardiovascular magnetic resonance predicts reversible myocardial dysfunction and remodeling in patients with heart failure undergoing beta-blocker therapy.

## Current and new clinical applications for CMR: myocardial tissue characterisation

Every attempt has been made to ensure the accuracy of the information contained herein at the time of writing; however, owing to the nature of pharmacy practice, standards and recommendations change regularly. The future of cardiovascular imaging in the diagnosis and management of heart failure, Part 1.

## **Current and new clinical applications for CMR: myocardial tissue characterisation**

Risk stratification with the use of non-invasive imaging of coronary artery disease is another important focus in this program, aiming at integration of intravascular echocardiography, nuclear cardiology, magnetic resonance imaging MRI , and multi-slice computer tomography CT in collaboration with the Department of Radiology. Diastolic function Echocardiography is the best-established non-invasive technique for the evaluation of diastolic dysfunction.

### **Article**

Pharmacists are advised to verify all information and data before treating patients or employing the practices described in this educational activity. The Cardiovascular Center Leiden will join a large US surgical trial network in which multiple randomized trials will be conducted, starting with one on functional tricuspid valve surgery.
