HTML meta tag

So the above generic patterns are surprisingly effective. If you do, it is a matter of fairness not to use any address that is actually used by a real person. It should not be enabled for sites that work without it.

Describe attribute fields—ArcGIS Online Help

Tags that are created based on client or server headers are evaluated later on and can overrule CLIENT-TAG and URL patterns! This makes it easier to diagnose problems, but on the downside you can't write filters that only change header x if header y's value is z. Then comes the default set of rules which will apply universally to all sites and pages be very careful with using such a universal set in user. But the mechanism works quite differently.

Actions Files

Below that, there is a list of URL and tag patterns, each on a separate line. External filters can be defined in one or more files as defined by the option in the. Should only be enabled for individual sites.

Describe attribute fields—ArcGIS Online Help

Field value types The following table lists each value type you can assign to a field and what each value type represents: Field value type What the field contains for each feature Name or Title Text that represents a name, title, label, or keyword for each feature.

Mission, Vision, & History

This makes banners disappear completely, but makes it hard to detect where Privoxy has blocked images on a given page and complicates troubleshooting if Privoxy has blocked innocent images, like navigation icons.
