Best of Antiques, Vintage, Collecting

Thus, reaction solutions may be provided without RNA. Candidates which appeared to be thermostable after the second screen were grown in small cultures and tested a third time for thermostable reverse transcriptase activity. The invention further includes nucleic acid molecules prepared by the above methods and reaction mixtures used in and formed by such methods.

HistCite

In additional specific embodiments, the first nucleic acid molecule is a single-stranded cDNA. Tags used to prepare compositions of the invention may vary in length but will typically be from about 5 to about 500, from about 5 to about 100, from about 10 to about 100, from about 15 to about 100, from about 20 to about 100, from about 25 to about 100, from about 30 to about 100 from about 35 to about 100, from about 40 to about 100, from about 45 to about 100, from about 50 to about 100, from about 55 to about 100, from about 60 to about 100, from about 65 to about 100, from about 70 to about 100, from about 75 to about 100, from about 80 to about 100, from about 85 to about 100, from about 90 to about 100, from about 95 to about 100, from about 5 to about 80, from about 10 to about 80, from about 20 to about 80, from about 30 to about 80, from about 40 to about 80, from about 50 to about 80, from about 60 to about 80, from about 70 to about 80, from about 5 to about 60, from about 10 to about 60, from about 20 to about 60, from about 30 to about 60, from about 40 to about 60, from about 50 to about 60, from about 5 to about 40, from about 10 to about 40, from about 20 to about 40, from about 30 to about 40, from about 5 to about 30, from about 10 to about 30, from about 20 to about 30, from about 5 to about 25, from about 10 to about 25, or from about 15 to about 25 amino acid residues in length.

Chapter 8 Sulphospinels

To make the nucleic acid molecule or molecules complementary to the one or more templates, at least one primer e. Any of the above-described series of amino acids e.

The anthracen

In some cases, the reverse transcriptases of the invention may produce an amount of full length product at a higher temperature that is greater than the amount of full length product produced by the reverse transcriptase at a lower temperature e. Specific activity may be determined using enzyme

assays and protein assays well known in the art. The present invention is also directed to nucleic acid molecules e.

Reputation Profiles & Scores

In particular instances, from about 0. Selecting Colonies Containing Active Reverse Transcriptase. .

Reputation Profiles & Scores

Other methods of cDNA synthesis which may advantageously use the present invention will be readily apparent to one of ordinary skill in the art. The reactions were analyzed using an ABI PRISM 377 DNA Sequencer. The invention further relates to fusion proteins comprising 1 a protein, or fragment thereof, having one or more activity associated with a reverse transcriptase and 2 a tag e.

HistCite

The nucleic acid molecules of the present invention may also be used to prepare compositions for use in recombinant DNA methodologies.
