Restoration and Management of Coastal Dune Vegetation

These habitats are also critically important for many species harvested in the Nation's commercial fish and shellfish industries.

What are the advantages and disadvantages of dune regeneration?

This aerial photograph of the Nebraska Sand Hills paleodesert shows a well-preserved crescent-shaped dune or barchan about 60 to 75 meters high.

Beaches and Coastal Landforms

The potential for dune recovery is dependent on the sediment supply in each area and on the intensity of human impact.

Dune

Where there are barrier beaches fronting embayments, the sand absorbs the energy much as it does at the base of cliffs. These dunes can be classified into four categories in terms of morphology, from East to West : 1- parabolic dunes, 2- crescentic or barchan dunes, 3- round dunes caudeyre , 4- foredune or Aeolian sand barrier along the shore.

Barrier island

Leave one-third of the upper shoot out of the ground. A wide variety of species is available, with variable stem sizes and growth characteristics.

What are the advantages and disadvantages of dune regeneration?

Vegetation complexes of coastal sand dunes as an evaluation instrument of geomorphologic changes in the coastline. Suggested une fertilization schedule for homeowners. It is really important to not block natural processes which could destroy the system Bodéré et al.
