Impact of parent

Regardless of the technique used immediately before the separation, children receiving no preparation at home remained with the stranger longer and played more than children given advance preparation. These include psychological disorders depression and anxiety ; feelings of sadness, loss and anger; under-achievement at school and in employment; social problems, including delinquent and deviant behaviour; a higher incidence of drug and alcohol abuse; poor parent-child relationships; and poor adult relationships, based on a lack of trust with a high incidence of early divorce. Although these outcomes are clear, it cannot be simply assumed that parental separation is their underlying cause Joseph Rowntree Foundation, 1998.

Tracking the Effects of Divorce

Role changes in primiparous women during 'doing the month' period. Health impacts of parental migration on left-behind children and adolescents: a systematic review and meta-analysis.

The determinants of children's responses to separation. — Rutgers, The State University of New Jersey

Background Parent-child separation is a considerable adversity for left-behind children LBC , but there is little evidence on the association between detailed characteristics of parent-child separation and social-emotional development among LBC. There were ten statistical tables in the article, some of which gave the children's descriptions of their parents. Nonetheless, he concluded, despite these limitations, that these four types of research studies provide a picture of roughly defined risk factors that divorce sets off in families and that seem to lead to negative results for children Stewart, 2001: 12-13.

Tracking the Effects of Divorce

Liu Z, Li X, Ge X. Each issue consists of a single study or a group of papers on a single theme, accompanied usually by commentary and discussion. We did not measure 17 children under three 3 months because they were less than the measurement age of the ASQ:SE and we failed to measure 35 children aged 3—35 months because their caregivers were eager to do housework or the interviews could not continue due to the children crying.

Tracking the Effects of Divorce

Three basic styles of maternal departure style were identified. An interesting finding was the positive correlation between higher intelligence of a child and increased anxiety, and in one part the positive correlation between support of wider family and a higher level of loyalty conflict in the child.

Autistic Children's Responses to Separation and Reunion with Their Mothers

. Generally, the parents' questionnaire focussed on: the parents' report of the amount of conflict preceding the separation; the parents' description of how the children were informed about the divorce; the parents' description of how they reacted to news of the divorce; the parents' perceptions of their children's present attitudes towards the divorce; and parents' views on possible strengths their children had acquired over the course of the divorce.

Explaining to young children about an upcoming separation from their mother: When do i tell them?

Parent-child separation among left-behind children Table shows detailed descriptions of parent-child separation among left-behind children in different characteristics and groups. Chicago: University of Chicago Press. After 15 minutes there was a knock on the observation mirror signaling the mother to leave the room.

The determinants of children's response to separation (1977 edition)

For example, Rutter 1981 concluded that a child's separation from his or her intact family is a potential cause for short-term distress, but is of little direct importance as a cause of long-term disorder. An ethological study of some aspects of children in nursery school.
