However some mitigation can be realized by using building materials and paints that are non-reflective and colors compatible with the existing landscape. The process area buildings or structures will not require aircraft warning lights. It is based upon on-site reconnaissance and documentation, Forest Service VMS inventory mapping, and published sources pertaining to the resources of the region.

Mountain goat resource selection in relation to mining

Large grassy tidal meadow at mouth of Gokachin Creek and waterfall adjacent to saltwater cabin. The expressed concerns for the project include effects on air quality from fugitive dust and gaseous emissions. The new designations reflect the approved Plan of Operations 1992 and acknowledge the modifying effect an active mine development will have on visual resources, while managing for a return to less noticeable visual effects in the long term following mine closure and reclamation.
