Rainforest Soil

Much of the dry season precipitation in temperate rainforests comes in the form of fog. More importantly, limiting factors differ from biome to biome.

Rainforest Ecosystem

Other creatures such as anteaters, armadillos, and wild pigs can find something to eat on the forest floor as insects, as well as roots and tubers are abundant. It feels like the summer season in all the seasons. In a freshwater ecosystem, examples might include aquatic plants, fish, amphibians, and algae.

Rainforest Ecosystem

John Peterson published his first article in 1992. Canopy The rainforest canopy is composed of trees that grow to heights between 100 - 150 feet.

Rainforest Ecosystem

All these species living together in the rainforest makes it rich biodiversity on the planet. This decomposition forms a fine layer of humus that provides a little number of nutrients for plant growth. Nonprofit organizations are tackling rainforest conservation through a variety of different approaches.
