Performance analysis and development of a refrigeration cycle through various environmentally friendly refrigerants

Tomczyk J, Silberstein E, Whitman B, Johnson B. They must have certain characteristics which include good refrigeration performance, low flammability and toxicity, compatibility with compressor lubricating oils and metals, and good heat transfer properties. The article discusses three major methods for inducing this reaction.

Development of an alternative refrigeration cycle, International Journal of Energy Research

The optimal values of b^{-2} and of z^2 also depend on the values of Reynolds number, which determines fluid flow friction losses. For example, in terms of cooling capacity production, R32 and R407C are better than R32.

Development of an alternative refrigeration cycle, International Journal of Energy Research

Conversely, refrigeration horsepower is lower with a higher evaporating temperature.

Development of a Steam Jet Refrigeration Cycle for the Actual Application Driven by Low Grade Thermal Energy

Based on the test results, maximum recorded concentration of carbon dioxide during summer season with 4 occupants i.
