The future of energy: Taking on tomorrow

These were tested with the facts, uncertainties and probabilities of the global energy scene prior to listing their own priorities for energy development, expectations and options.

The future of energy: Taking on tomorrow

Six decades of research went into creating the device that will finally teach us about our own sun.

World Energy Outlook finds current trajectory of clean energy growth not enough to combat climate change

The Sustainable Development Scenario indicates what needs to be done differently to fully achieve climate and other energy goals that policy makers around the world have set themselves. A great source for those who want to explore why the United States has tried to maintain world primacy at tremendous financial and moral cost, in an attempt to project American exceptionalism throughout the world.

WEC Commission: Energy for tomorrow's world

James Burke born 22 December 1936 is a British broadcaster, science historian, author, and television producer.
