Land Use and Land Cover Change

Land-use decisions are traditionally based on short-term economic factors. Wade, 2015: Combining NLCD and MODIS to create a land cover-albedo database for the continental United States. The Shared Socioeconomic Pathways SSPs have been developed to explore how future scenarios of climate change interact with alternative scenarios of socioeconomic development in terms of population, economic growth, and education to understand climate change impacts, adaptation and mitigation, and vulnerability.

Global Change Biology, 17 2 , 974—989. Indian Council of Agricultural Research, Nagpur.

USDA ERS

Journal of Climate, 26 11 , 3671—3687. In 1790, only about 5 percent of the US population lived in urban areas; by 1920, about 50 percent lived in cities.

Land use and its patterns in the United States (1959 edition)

The base map is the 1992 National Land Cover Dataset Vogelmann and others, 2001.

4.2 United States: Early Development and Globalization

Urban land use literally refers to what takes up the physical space of a town or city. The project spanned from 1999 to 2011. The recent expansion of oil and gas extraction activities throughout large areas of the United States demonstrates how policy, economics, and technology can collectively influence and change land use and land cover.

Land Use and Land Cover Change

SOURCE: National Bureau of Soil Survey and Land Use Planning. Some experts believe that this could be the if human-driven climate change continues to increase average temperatures across the globe.
