For opsec-safe download cradles, check out. Changing the Startup Type of a Service Troubleshooting system problems sometimes requires administrators to enable or disable a service or change its startup behavior.

### DDoS monitoring: how to know you're under attack

This guide was written using Server 2012 R2, however it should be the same steps for Windows Server 2008 R2 as well. The permission ReadLAPSPassword grants users or groups the ability to read the ms-Mcs-AdmPwd property and as such get the local admin password. This is easily done through properties in Enterprise Manager but will cause SQL Server to fail to start.

**Windows & Active Directory Exploitation Cheat Sheet and Command Reference :: Cas van Cooten — I ramble about security stuff, mostly**

This makes it easier for specific server administrators to configure delegation, without requiring domain admin privileges.

### Enabling SSL on Windows Server Update Services (WSUS)

I will try to keep it updated as much as possible! This is because in my haste to get the SQL Server services installed on my machine I had set up the services to start up under the local service account instead of under a single domain account like my SQL Server did.

### Local System Account

In an ideal environment, a service or process would only have the minimum set of permissions and access required for it to perform its function.
