The Carrier Project

This could lead to a relatively quick but confused attack. Starting in August 1942, new fast battleships were attached to carrier forces. The Fieseler designed Fi-167, which easily won over the Arado Ar-195, exceeded the specs in many areas.

Flaming Flattops: Deadly Fires Struck U.S. Aircraft Carriers

Using Chrome or Firefox will work. The Junkers Ju-87C Stuka for Sturzkampfflugzeug dive bomber, which would soon terrorize continental European countries under the boot of the Nazis, was chosen for its robust structure, which could be redesigned for carrier use— including wings that folded at the kink in the inverted gull wing and the addition of a tail hook for arresting landings. Rowland 234 For close-in anti-aircraft protection the newly adopted 20mm Oerlikon gun was 8 to 10 times more effective than the.

Aircraft Carrier Tactics of World War II

Before it was shot down, the rear gunner managed to shoot down one of the Mustangs, one of the last biplane kills of the war. The flight deck was used as an antenna deck. In 1943, the Japanese introduced a new dive bomber, but it was little different from past models in that it could carry only 1,000 pounds of bombs, the same as its predecessor.

Flaming Flattops: Deadly Fires Struck U.S. Aircraft Carriers

Although several of the latest Commencement Bay-class CVE were deployed as floating airfields during the , the main reasons for the development of the escort carrier had disappeared or could be dealt with better by newer weapons.
