Men and women, alcohol and aggression

The long history of human biparental care is mirrored in the fact that the vast majority of the world's population live monogamously, despite the large number of societies that permit polygyny.

Aggression and Androgens in Women.

It also can prevent the harmful and long-lasting effects of IPV on individuals, families, and communities.

Men and women, alcohol and aggression

Men respond to negative stimuli with greater activity in the AIC. There are genetic determinants of both physical and indirect aggression, suggesting that both types of aggression give evolutionary advantages. In our own species, the psychological evidence points strongly toward greater fear rather than lower anger as the proximate mediator of women's less intense aggression.

Male Aggression

It does not assume a polygynous mating system and recognizes that incentives other than copulation opportunities can support female aggression. IPV can also result in death. Atlanta, GA: National Center for Injury Prevention and Control, Centers for Disease Control and Prevention.

Aggression and Androgens in Women.

The right box indicates the different forms of aggression that women engage in and their relative frequencies.

Women's aggression

Individual Differences in Aggression Aggression occurs when we feel that we are being threatened by others, and thus personality variables that relate to perceived threat also predict aggression.

Men and women, alcohol and aggression

For these women, fighting is not seen as antithetical to cultural conceptions of femininity, and female weakness is disparaged.
