Pedagogical considerations concerning the problem of representation. Using kilometers and dollars, an equation is constructed based on the rule of sponsorship. Ultimately, by establishing the meaning of y-intercept in the context of the walkathon and by applying that meaning to the different representations of a function, the confusion of slope and y-intercept is significantly minimized for students. If students lack a conceptual understanding of linear function, what errors might they make? Emile Durkheim has many purposes for studying elementary forms of Religion.
