Alcoholism and Psychiatric Disorders

Analysis of the receiver's EEG in remote perception task: Journal of International Society of Life Information Science Vol 19 2 Sep 2001, 458-462.

Concentration

It provides satisfactory intraobserver and interobserver reliability for the assessment of UC severity. For example, compared with patients with alcoholinduced depression, patients with independent depression were more likely to be Caucasian, married, and female; less experienced with other illicit drugs; less often treated for alcoholism; more likely to have a history of a prior suicide attempt; and more likely to have a family history of a major mood disorder. Annu Rev Psychol 49: 87—115.

Relationship Between Blood Alcohol Concentration and Observable Symptoms of Intoxication in Patients Presenting to an Emergency Department

It is more difficult to exclude the possibility that chronic heavy cannabis use produces a minor impairment in immunity. . Laboratory research on animals and humans has demonstrated that the primary psychoactive constituent in cannabis is the cannabinoid, delta-9-tetrahydrocannabinol or THC.

Review A review of the literature on the cognitive effects of alcohol hangover

Percept Mot Skills 69, 199-210. Because of its slow release from fatty tissues back into the bloodstream, THC and its metabolites may be detectable in blood for several days, and traces may persist for several weeks.

Review A review of the literature on the cognitive effects of alcohol hangover

Skills performance at low blood alcohol levels. In general, the larger a person is the more blood they have and therefore blood alcohol

concentration is lower per unit of alcohol consumed. There is strongly suggestive evidence that chronic cannabis use may precipitate a latent psychosis in vulnerable individuals.

Sobriety tests for low blood alcohol concentrations

Δ 9-tetrahydrocannabinol THC , cannabis' main psychoactive compound, was the most prevalent illicit drug detected in injured drivers in Victoria, Australia and cannabinoids were identified in 8. Mean standard deviation for accuracy, reaction time and errors of commission on the n-back for 14 frequent and 10 occasional cannabis smokers following controlled smoking of a 6. Test Performance presents mean \pm SEM scores on the tests of the evening session baseline performance and the morning session, and the outcome from the statistical analyses, both within and between the alcohol group and the placebo group.

Alcohol Hangover Effects on Memory Functioning and Vigilance Performance after an Evening of Binge Drinking

All participants were treated in accordance with the guidelines for Good Clinical Practice and the Declaration of Helsinki. A simple model and a concentration score for Bourdon tests: Nederlands Tijdschrift voor de Psychologie en haar Grensgebieden Vol 45 1 Jan 1990, 40-45. It may be helpful to begin this process by differentiating between alcoholrelated symptoms and signs and alcoholinduced syndromes.

Smoked Cannabis' Psychomotor and Neurocognitive Effects in Occasional and Frequent Smokers

Further, peak BAC after drinking gives an impression of the severity of hangover, and the sensitivity of the subjects to the effects of alcohol.
