**Can dung beetles from the palaeoecological and archaeological record indicate herd concentration and the identity of herbivores?**

The impact of species-area relationship on estimates of palaeodiversity. Sedimentation rates have increased during the Modern era and the Contemporary history.

## Quaternary palaeoecology Research Papers

Being intended for students, however, the book has the advantages of careful explanations of concepts and a clear and easily read language. Written by an ecologist with paleoecological expertise, this book reviews the climatic changes that have occurred during the last 2. High degrees of fragmentation may have suppressed the number of identifiable species.

## Quaternary palaeoecology Research Papers

This can be applied to a range of Pleistocene and Holocene deposits, even where no animal bones have been found. Changes in sea level, land area, and climate impact the distributions and abundances of fauna and flora Pearson and Dodson, 1993; Mayhew et al. Royal Entomological Society of London, London.

## Quaternary palaeoecology Research Papers

This palaeoecological interpretation can be used in conservation efforts on nearby Barrow Island, a Class A ecological reserve, and management of faunas in conservation reserves and on islands. As sea level rose through time, however, that area became smaller, and the rate of species loss increased. Field assistance was also provided, at different points, by Pam Grinter, Andy Howard and Kat Sharrock Walsh University of Birmingham.

## Quaternary Palaeoecology

The identified material was then counted for each spit, and the counts for each spit and species organised in a spreadsheet. Only a 6 mm sieve was

used here, and spits were 50 to 70 mm deep, due to the presence of large boulders.

### **Palaeoecology and rising seas**

Outbreaks of rodents in semi-arid and arid Australia: causes, preventions, and evolutionary considerations, p.

### **Can dung beetles from the palaeoecological and archaeological record indicate herd concentration and the identity of herbivores?**

A high-resolution study of the rich archaeofauna from the Early Azilian occupation at the Northern Alpine site of La Fru provides data on the habitat and exploitation of roe deer. Aridity and settlement in northwest Australia.

### **Quaternary palaeoecology and nature conservation: a general review with examples from the neotropics**

Excavated materials from spits one to seven were passed through nested 6 mm and 3 mm sieves.
