It shall then emphasize on my career, experiences, and analysis which will help in developing my overall personality. The process of learning through stimulated experiences can be done both in and outside of schools, it is fun for the children that still meets criteria of the curriculum, however it is the reflection on these experiences that give children a deeper understanding and supports their future learning. The generalisation Abstract Conceptualisation stage is the part of the experiential learning cycle in which the participants form conclusions and generalizations which might be derived from, or stimulated by the first two phases of the cycle.

## How to Apply Experiential Learning

The learning styles that Kolb formulated have only been used in a limited cultural range. The Experiential Learning Cycle Concrete Experience Concrete experience describes the hands-on personal experiences that we learn from. Conversely, when we subject people to inappropriate teaching or training, which does not interest them or fit their preferred learning style, we put people off learning and development, sometimes permanently.
