Chapter 6 Iron

Riviere Temiscamie Air Roberval Ltee Aerodrome pedia.

Archaeological Investigations in the Region about Lakes Mistassini and Albanel, Province of Quebec, 1948 on JSTOR

Over the centuries, it went through many name changes and different spellings.

Parks Canada

FLORA AND FAUNA Two types of vegetation fashion the landscape of the region. The fold belts marginal to the Ungava craton consist of thick sequences of shale, dolomite, chert breccia, quartzite, iron-formation, and black shale that were deposited on the older crystalline rocks in basins and embayments on the continental shelf. Overall and at present, 12 traplines are now over 50% protected and we should also rejoice in seeing the protection of Waswanipi, Evans, Du Tast, Dana, Giffard and Theodat Lake along with smaller lakes and rivers; Old Nemaska along with their rock paintings and a caribou habitat in Assinica Park.

Archaeological Investigations in the Region about Lakes Mistassini and Albanel, Province of Quebec, 1948 on JSTOR

This chapter presents an overview of iron-formation in fold belts marginal to the Ungava craton. Shows the elevation of the CPR line stretching Montreal bottom right to Vancouver, Canada top left. The gold is occluded within arsenopyrite grains and the average ore grade is 11 ppm.
