Liquid Non ionic Ready to use paste with elastic covering effect, white or pigmentated. Mixtures of cationic and non-ionic surfactants demonstrate synergistic antistatic properties.

Additives in fibers and fabrics

Time is required for the additive to migrate to the surface of the polyolefin product and to attract moisture from the air and minimize static buildup. When phosphites are used at optimized levels in combination with catalytic amounts of zinc and normal levels of epoxidized soybean oil, they provide excellent early color and adequate long-term stability to flexible PVC compounds. .

Textile Finishing

Concentrations of 7% wt or more are required for tropical climates. It can be used in high turbulence machinery, on bobbins and hanks. Agitator speed 60 -70 rpm Once you get clear liquid, add 1% wt.

Prochimica Novarese

This product is a nonionic wetter, ester based sanforizing lubricant and a unique polyethylene softener.
