Safety in the use of asbestos

There are approximately 3,000 new cases of mesothelioma in the United States each year, with a median age of diagnosis at 74 years old. Asbestos is most hazardous when it is friable.

What is Asbestos?

Asbestos exposure in general industry occurs in a wide variety of industrial and commercial settings. The fibrous or fluffy sprayed-on materials used for fireproofing, insulation, or sound proofing are considered to be friable, and they readily release airborne fibers if disturbed. Air samples are typically analyzed using PCM.
