## Department of Food Science & Technology

The health and growth of the root system has deep implications for our future. The data collection takes only a few minutes, which is comparable to an MRI or X-Ray machine.

### Adapting roots to a hotter planet could ease pressure on food supply: Supercomputer

In their experiments, the system reliably computed all traits, including the distance between whorls and the number, angles, and diameters of nodal roots for 12 contrasting maize genotypes with 84 percent agreement with manual measurements.

## Research

Special emphasis is given to fundamental and applied research findings that have potential for enhancing product quality, extend shelf life of fresh and processed food products and improve process efficiency. There could be a point where this planet can't produce enough food for everybody anymore, and I hope we, as a science community, can avoid this point by developing better drought adapted and CO2 sequestering plants. Hundreds of plant scientists worldwide use it, including researchers at leading agribusinesses.

### Adapting roots to a hotter planet could ease pressure on food supply: Supercomputer

The objective of FDSN 508 is to prepare students for entering food product development through a team project experience. Its vast resources can very well be taken into account, considering the Institute for Food Safety and Health library and online portal that makes accessing journals and research articles convenient and rapid. Our extension and outreach programs transfer research-based information and technology to consumers, food and beverage companies, and government agencies with the goal of enhancing the availability, quality, and safety of our food supply.

## Department of Food Science & Technology

They might have a function and a role to fulfill.

## **Department of Food Science & Technology**

The Department of Food Science and Nutrition prepares its graduates for careers that involve the application of science, technology, engineering, and regulatory compliance to address current food- and health-related issues. It uses a cluster of 10 Raspberry Pi micro-computers to synchronize the image capture from 10 cameras and then transfers the data to the CyVerse Data Store -- the national cyberinfrastructure for academic researchers -- for 3D reconstruction.

## **Journal of Food Science and Technology**

We're excited to see the progress that the team at PSU and UGA has made over the course of their award. Due to the overwhelming number of manuscripts coming to the journal, there could be a delay of 30 days in the first decision.
