## Friendology: The Science of Friendship

Comparison of substance use, subjective well-being and interpersonal relationships among young people in foster care and private households: A cross sectional analysis of the school Health Research network survey in Wales. Parents and other adults often focus their concern on these aspects of youngsters' life. This renders the data for Sweden more objective, and presumably of higher quality.

## Factors associated with schoolchildren's general subjective well

Main analyses: dyadic similarities in functional connectivity as a function of social proximity To test our main hypotheses, we examined whether similarities in resting-state connectivity and brain network characterization were explained by social proximity.

## Cyberbullying and subjective health: A large

This control is included here since the aim of the analysis is to understand the effect of other types of social exclusion besides the effect of absence of friends. Research in Sociology of Education and Socialization, 4, 101—128.

## No evidence for a relationship between social closeness and similarity in resting

Isolation here is understood as the absence of personal links e. Student enrollment based on the results of central examinations causes the schools to differentiate based on student socioeconomic status and academic achievement.

## Friendship Lessons, Worksheets and Activities

Journal of Adolescent Health, 60 4 , 438—446.

### **No evidence for a relationship between social closeness and similarity in resting**

Around one third of all respondents had missing information on one or more variables that were included in the analysis, mainly due to missingness on the outcome variable, grade point average GPA; 3328 of 15,017 cases.

### **Friendship Lessons, Worksheets and Activities**

Alcohol consumption, early-onset drinking, and health-related consequences in adolescents presenting at emergency Departments in England.

### **Factors associated with schoolchildren's general subjective well**

To ensure that discarding lower ratings of social connectedness did not drive the effects we observed in our analysis, we repeated the analysis using the magnitude of the direct tie between scanned participants i.
