Seasonal dynamics and production of *Campsurus violaceus* nymphs (Ephemeroptera, Polymitarcyidae) in the Baía River, upper Paraná River floodplain, Brazil

Badania fizjograficzne nad Polska zachodnia 22 1 : 1—14. Jewett, 1960 , probably during the Lee Garnett Day Expedition in 1927.

EPHEMEROPTERA OF THE WORLD: References

Refolding the wings involves the reversal of these mechanisms, assisted by movements of the abdomen. Some of these affect the nymphs' behaviour in such a way that they become more likely to be predated.

Mayfly

The abdomen is soft and visibly 10-segmented, although remnants of segments 11 and 12 are present, including cerci.

Ephemeroptera

Two new species in fauna of Ephemeroptera of Yugoslavia. Species richness generally decreases in these countries from North to South due to the well-known peninsular effect.

Life cycle and secondary production of *Caenis luctuosa* (Ephemeroptera) in a semiarid stream (Southeast Spain)

In some species, it may last for just a few minutes, while the mayflies in the family have sexually mature subimagos and no true adult form at all.

Mayfly

Influence of benthos life history upon the estimation of secondary production. *Callibaetis vitreus* *Callibaetis fuscus* Thew T.

Life cycles and secondary production of Ephemeroptera, Plecoptera, and Trichoptera (Insecta) under an extreme continental climate (River Kharaa, Mongolia)

During the day, adults are usually found resting on vegetation or foliage.

EPHEMEROPTERA OF THE WORLD: References

The adult is mandibulate with filiform antennae, bulging compound eyes, two or three ocelli, and subequal thoracic segments. Macroinvertebrate production in a southeastern United States blackwater stream.
