Returns: Ciphertext of the multiplication of the plaintexts  $p_1$  and  $p_2$  where  $alg$ . Digital signatures are intended for use in electronic mail, electronic funds transfer, electronic data interchange, software distribution, data storage, and other applications that require data integrity assurance and data origin authentication. TBC1D15 interacts with NOTCH to activate NOTCH pathway Our immunoaffinity purification for TBC1D15 interacting proteins, identified NOTCH1, 2, 3, and 4 as high-confidence interacting proteins Supplementary Fig.
