

Candidates perception of voter competence - a comparison of winning and losing candidates

Laboratory for Political Research, Dept. of Political Science, University of Iowa - The electoral connection in Australia: Candidate roles, campaign activity, and the popular vote

	Average Agreement		Cross-country Comparison
	U.S. Election ^a	Korean Election ^b	U.S.-Korea ^c
All participants (N = 88)	48.18%	52.21%	-0.04%
SD	9.47%	8.42%	(1.76) = 2.57
95% CI	(37.42%, 64%)	(50.64%, 64%)	(-5.94%, -0.11%)
Losses participants (N = 43)	47.53%	50.48%	-4.68%
SD	10.28%	8.72%	(1.28) = 2.23
95% CI	(24.70%, 64%)	(50.14%, 64%)	(-8.58%, -0.58%)
Winners participants (N = 45)	50.86%	51.95%	-1.09%
SD	8.38%	8.54%	(1.28) = 4.53
95% CI	(34.82%, 64%)	(40.79%, 64%)	(-5.05%, 2.88%)

^aAverage agreement between U.S. election outcomes and face-based inferences of competence, and to one-sided tests against chance level 50%.

^bAverage agreement between Korean election outcomes and face-based inferences of competence, and to one-sided tests against chance level 50%.

^cTwo-sided tests on the average agreement across U.S. and Korean elections.

Perceptions of Competence, Strength, and Age Influence Voters to Select Leaders with Lower

All communications between Sample Strategies and panel members explain why the member has been selected to participate in a study, what he or she should expect from membership in the panel, and offer multiple methods to opt-out of participating. In sum, we would expect disabled candidates to be perceived as more concerned about and competent in handling policy in the areas of healthcare, minority rights, and social security and welfare. While in North America and elsewhere, person-first language is preferred, i.

Candidates' Perception of Voter Competence: a Comparison of Winning and Losing Candidates

These funders had no role in study design, data collection and analysis, decision to publish, or preparation of the manuscript. Participants were free to stop participating at any time by closing their web browser program.

The electoral connection in Australia: Candidate roles, campaign activity, and the popular vote

These mechanisms would suggest that voters hold belief and competence stereotypes about disabled candidates, too. Furthermore, voters also perceive disabled candidates as more compassionate and honest, in line with the stereotype content model prediction.

Who Cares? Explaining Perceptions of Compassion in Candidates for Office

Analysis To analyze the effects of candidate disability, I regress the outcome measures on the randomly assigned candidate characteristics using linear regression analysis.
