Sugarcane Diseases, Pests Sugarcane Diseases

Migdolus Beetle O Migdolus fryanus is a beetle of the Cerambycidae family, which, in its larval stage, attacks and destroys the root system of several crops, including the sugar cane. In general, these products can eliminate up to 90% of an area's nematode population and, when used correctly, have provided highly rewarding results.

Sugarcane smut

The main way to control leaf scald is done through resistant and tolerant varieties. Crop Stage-wise IPM practices for Sugarcane To know the crop stage-wise IPM practices,.

Sugarcane

After splitting open the diseased stalk, a sour smell emanates. Fold-outs, if any, are not part of the book. These two stages are slowly merging.

Sugarcane Its Diseases

Mechanical transmission by equipment and by human activity is not an issue. These teliospores located either in the soil or on the plant, germinate in the presence of water.

SSAGR203/SC003: Sugarcane Eyespot Disease

Has never been recorded in the districts north of Bowen.
