Mathematics education and the legacy of Zoltan Paul Dienes (2008 edition)

He wrote his doctoral dissertation on the foundations of mathematics.

Finally, they moved back to the American continent: he was invited to the Acadia University in Wolfville, Nova Scotia. These articles exemplify his principles of guided discovery learning and reveal the non-trivial mathematical structures that can be made accessible to any student. Dienes' notion of embodied knowledge presaged other cognitive scientists who eventually came to recognize the importance of embodied knowledge and situated cognition - where knowledge and abilities are organized around experience as much as they are organized around abstractions.

His suggestions were hardly built into the reforms because, among other reasons, they were regarded as unrealizable. He believed that the reason children did not have a deep understanding of positional notations was because the concept of exponentiation had never been introduced to them properly. His obituary can be found.

Dienes called his own method a Trojan horse: reforming mathematics education was just an opportunity, the real objective was to facilitate the development of young personalities. In Italy, he was entrusted with the creation of a series of textbooks for the elementary schools.

Mathematics education and the legacy of Zoltan Paul Dienes (2008 edition)

In this work he had to maintain a careful balance between what was psychologically correct and commercially appealing. If we present tasks that are based on mathematical structures in a playful manner, then they are able to show surprisingly high cognitive achievements at surprisingly young ages. Fortunately his teacher did not punish him for his lack of attention, rather he decided to facilitate him through private discussions.
