## Practical Surfactant Mixing Rules Based on the Attainment of Microemulsion

Now, the possibilities are very numerous because the exact position of the frontiers also depends on some specificities of the surfactants, oils, and brine, as well as cosurfactants, and polymers. New Interfacial Rheology Characteristics Measured using a Spinning Drop Rheometer at the Optimum Formulation.

## Retrograde Transition in the Phase Behavior of Surfactant

Oil splitting in industrial cleaning systems as studied by conductivity and interfacial tension. Classification of Surface Active Agents by HLB. Tunable Synthesis of Mesoporous Silica Particles with Unique Radially Oriented Pore Structures from Tetramethyl Orthosilicate via Oil—Water Emulsion Process.

## Retrograde Transition in the Phase Behavior of Surfactant

In Recent Advances in Liquid-Liquid Extraction; Hansen, C. Chapter 2 Silicone Emulsions and Microemulsions.

## Relationship between microemulsion phase behavior and macroemulsion type in systems containing nonionic surfactant

Part 4: Robustness of the Optimum Formulation Zone Through the Insensitivity to Some Variables and the Occurrence of Complex Artifacts.

## Emulsion Formation

The physicochemical properties of SOW systems depend on the surfactant behavior and also on the other ingredients aqueous brine, oil, additives and certain conditions temperature and pressure.
