college drinking and the effectiveness of prevention programs. These findings strengthen the case for developing international screening instruments for hazardous and harmful alcohol consumption. Shorter forms of AUDIT have been found acceptable in several

Managing Alcohol Use Disorder in Primary Health Care

So, it seems that the length, complexity and sophistication of the advice are less important than the actual contact between provider and patient. Over 86% of GP visits in this study were for alcohol dependency syndrome. The efficacy-effectiveness distinction in trials of alcohol brief intervention.

RACGP

We found moderate-quality evidence that brief interventions can reduce alcohol consumption in hazardous and harmful drinkers compared to minimal or no intervention. In another study in an ACCHS in regional NSW, a touchscreen computer showed an image of a drinking threshold e. The WHO Phase III four-country study on the identification and management of alcohol-related problems in primary care found that the odds ratios for the impact of training and support on increased screening defined as 20% or more of eligible patients screened was 2.
