

Biology of predator control

Addison-Wesley Pub. Co. - PREDATOR CONTROL AND ERADICATION

Description: -

Man-woman relationships -- Rome -- Poetry
 Love poetry, Latin -- Translations into English
 Elegiac poetry, Latin -- Translations into English
 Brattleboro (Vt.) -- Church history.
 St. Michaels Episcopal Church (Brattleboro, Vt.) -- History.
 Law -- Germany.
 Natural law.
 Roman law.
 Savigny, Friedrich Karl von, 1779-1861.
 Predation (Biology)
 Predatory animals -- Control.biology of predator control

-
 An Addison-Wesley module in biology ; no. 11biology of predator control
 control
 Notes: Bibliography: p. 40-48.
 This edition was published in 1974

PREDATOR CONTROL AND ERADICATION

The bug has been successfully used against the and the *Frankliniella occidentalis*. Augmentation involves the supplemental release of natural enemies that occur in a particular area, boosting the naturally occurring populations there. Animals can often swim, fly and run faster than predators.

Predators

. As the number of predators rises, the number of preys decline. Caution should be used with this tactic because some plants attractive to natural enemies may also be hosts for certain plant diseases, especially plant viruses that could be vectored by insect pests to the crop.

Factors That Control Populations

When a natural enemy is successfully established it rarely requires additional input and it continues to kill the pest with no direct help from humans and at no cost. We found positive effect sizes for most population parameters reproductive success; adult abundance and survival , but not all brood size, nest success. However, the toad thrived by feeding on other insects and soon spread very rapidly; it took over native and brought foreign disease to native and , dramatically reducing their populations.

Case Study: Predator control — Animal Behavior and Conservation

Keep in mind that all insect species are also suppressed by naturally occurring organisms and environmental factors, with no human input.

What is Biological Control?

This is not to be used on its own, but in conjunction with your notes, experiments, textbook and blog. Introduction into New Zealand in the 1990s was similarly successful at first, but a decade later, immunity had developed and populations had returned to pre-RHD levels. Green can be encouraged by using plastic bottles with an open bottom and a roll of cardboard inside.
