Ministry of Social Services

Red blood cell morphology was done on wright stained thin blood smears. Grip strength was measured by a hand-held dynamometer Grip D, Takei, Japan in the second follow-up, and Lafayette 78010 in the third follow-up , separately for each arm.

Screening & Assessment in Child

Protection

Considering an optimal balance between sensitivity and specificity, failing 1 of the 6 items was chosen as the best cutoff for this age.

Cohort Profile: Andhra Pradesh Children and Parents Study (APCAPS)

Filesize: 10.29 MB

Journal of the American Academy of Child and Adolescent Psychiatry 37 2 :171—178, 1998. J Am Acad Child Adolesc Psychiatry. Intake of sodas reported in this study agrees with the observation made by the CANADEAN organisation Hants, UK; 2006 unpublished report showing that the French ingest smaller amounts of sodas than do comparable populations of 15 other European countries.

The relationship of Asperger's syndrome to autism: a preliminary EEG coherence study

This gives a quantitative assessment of the degree to which each of a range of measures, in combination, discriminate between levels of an outcome variable in this case, the care pathway assignment. J Nutr 137 2 472—7.

The relationship of Asperger's syndrome to autism: a preliminary EEG coherence study

Validation of the Comprehensive Feeding Practices Questionnaire with parents of 10-to-12-year-olds.
