

Coal-pyrite flotation : a modified technique using concentrated second-stage pulp

U.S. Dept. of the Interior, Bureau of Mines - Download [PDF] Flotation Of Pyrite From Coal Pilot Plant Study Free

Description: -

- English language -- Study and teaching (Secondary) -- Puerto Rico.
Coal preparation.

Flotation.Coop-pyrite flotation : a modified technique using concentrated second-stage pulp

- Bureau of Mines technical progress report -- TPR 91.
Technical progress report - Bureau of Mines ; 91Coop-pyrite flotation
: a modified technique using concentrated second-stage pulp
Notes: Prepared for Bureau of Mines Coal Preparation Program.

The Life Cycle of Water Used in Flotation: a Review

The underflow also contains clay and mineral shale. In many instances, the materials which serve as conditioners double as collectors.

Coal flotation optimization using modified flotation parameters and combustible recovery in a Jameson cell

Flotation studies indicate that pyrites have no self-induced floatability.

The aqueous liquid flotation composition contains an anionic surfactant of the type described above. Lucay F, Cisternas L, Gálvez E, López-Valdivieso A 2015 Study of the natural floatability of molybdenite fines in saline solutions and effect of gypsum precipitation.

Enhancement of coal flotation using impact flow conditioning pulp (Journal Article)

Where such combination is used, the proportion of anionic surfactant ranges between about 25% and about 80% by weight of the sum of the two, i.

Reverse flotation as a method of coal cleaning for preparation of coal

Subrahmanyam TV, Forssberg E 1988 Froth stability, particle entrainment and drainage in flotation — a review. Nuñez P, Hansen HK, Aguirre S, Maureira C 2011 Electrocoagulation of arsenic using iron nanoparticles to treat copper mineral processing wastewater. As further illustrated in FIG.

US Patent for Selective flotation of inorganic sulfides from coal Patent (Patent # 4,867,868 issued September 19, 1989)

Using humic acids as a model additive, this dual action of polymers was attributed primarily to increased coal hydrophilicity and to a higher coal surface charge in the presence of these additives.

Reverse flotation as a method of coal cleaning for preparation of coal

A shallow-depth froth separator was used to minimize the rising distance required to recover even the smallest size bubbles 100 µm and to quickly recover the mineral laden bubbles.

Enhancement of coal flotation using impact flow conditioning pulp (Journal Article)

Except for the novel use of the aforesaid anionic surfactant as a frothing agent, generally conventional practices may be followed in producing a pulp for feed to the flotation cell in the process of the invention .
