Bedford, Pitman, Boston, 1985, xiv+106 pp. They assumed that if the wind blew steadily for a long time over a large area, the waves would come

into equilibrium with the wind. Experimental results show that the performance of IPMC flow sensors is significantly improved under the stimulus of both periodic flow and laminar flow by the proposed silicone-capping.

Events of Nondestructive Testing (NDT)

One of the main advantages of using this type of IPMC is the ability to embed a specific tool and accurately control the tool tip location using the large deflection range of the IPMC. Reinforced Concrete Design by Computer , Author : By R.
