Circular labor migration and land

Regional diversity became more politically prominent after the 1956 states' reorganisation, the rise of non-Congress state governments, and the independence of Bangladesh. RE, random effects Funnel plot for the regional meta-analysis.

South Asia At Highest Risk Of Civil Unrest Globally

With the highest COVID-19 death toll in Southeast Asia, at more than 358,000 cases and nearly 13,000 deaths, the country's 270 million people are facing their first recession since the 1997-98 Asian financial crisis, with the World Bank forecasting a contraction of 2%.

Agricultural land

For this, we selected mutually exclusive studies and odds estimates to be incorporated into the regional meta-analysis. We find very little research to suggest environmental change as having large impacts on flea borne diseases ,.

Thai protests build as pandemic fuels unrest across Southeast Asia: How COVID aggravated inequality and triggered political reckoning across the region — New York Southeast Asia Network

Ways of knowing come from generations of learning in wide regions. Though many urban intellectuals in South Asia knew the countryside personally -- as landowners, merchants, bankers, and lawyers, and by their own family experience -- their public discussions and formulations of agrarian knowledge did not highlight their own direct, intimate knowledge.

Australian Financial Review

Most farm land lies in the semi-arid plains, including river valleys and plateaux; and almost all of the remainder is in the humid lowlands, which have a higher proportion of population than of farm land. A final subgroup analysis based on specific diseases or disease complexes again showed consistent associations between infection and agricultural exposure Fig.

How China funds and organizes riots and civil unrest in America

Both tools had 14 and 9 items, respectively, that classified study quality using specific epidemiological parameters, such as transparency of research question, sources of potential bias e. Evidence suggests that such changes related to physical characteristics of the landscape or biodiversity loss itself could favour disease carrying hosts or vectors or increase the efficacy of disease transmission to remaining hosts in this case people. Winters are much colder than below in the plains, and summers, much cooler, creating different, complementary ecologies for animals, vegetation, forests, farmers, and markets.
