Galaxies

The X-rays indicate massive X-ray binary systems.

What Is a Galaxy?

These images are truly amazing! The Whirlpool Galaxy left , also known as M51, an Sc galaxy accompanied by a small irregular companion galaxy, NGC 5195 right. The elliptical galaxy on the left has shot right through the center of the galaxy on the right, creating its ring-like shape.

Tiny Galaxies

Emerging galaxy research In recent years, astronomers have tracked galaxies and how their evolution is shaped by dark matter, a substance that cannot be sensed with traditional telescope technology. A more important difference is that you will see emission lines in addition to the continuum and absorption features that you saw in stellar spectra.
