

# Forest resource inventories - proceedings of a workshop

Dept. of Forest and Wood Sciences, Colorado State University - Integrated inventories of renewable natural resources: proceedings of the workshop. january 8

Description: -

- Land grants
- Education, Higher
- District of Columbia
- Forests and forestry -- Congresses. Forest resource inventories - proceedings of a workshop
- Forest resource inventories - proceedings of a workshop
- Notes: Includes bibliographical references.
- This edition was published in 1979

Filesize: 16.55 MB

In this project GIS is applied to forest inventory and analysis to evaluate spatial distribution and structure of forest parameters. Forty eight sampling plots for ground truthing were setup throughout the study area.

The newsletter also highlights engagements across FIA units nationally to further FIA's mission and ensure national consistency, collaboration and coordination. They are: a the creation of a GIS database model for forest inventory, and b the continuation of integrating digital imagery and lidar derived data for forest type classification. Proceedings of the International Conference and Workshop; September 24-30; Venice, Italy.

## Proceedings of the Scandlaser scientific workshop on airborne laser scanning of forests

It was then apparent that the Scandinavian countries had complementary experiences in this research field.

## Proceedings of the Scandlaser scientific workshop on airborne laser scanning of forests

This supports rapid generation of spatial layers based on point data. In GIS, with the location of each individual tree and its associated attributes including diameter and height available, the program is able to identify those trees to remove so that after thinning an evenly distributed basal area can be achieved resulting the stand stock desired by the user. Multispectral satellite imagery has been used for land cover type classification for decades.

#### **Proceedings of the Scandlaser scientific workshop on airborne laser scanning of forests**

It reviewed the forest landscape changes over time, linked timber measurement to the environment in geospatial context, and developed tools for forest management.
