Reflections

A successful human life is taken to be a productive life in the sense of being profitable for the society. First, let me make it clear that I recognize that the relationship between the surgeon and the patient is a unique one, and one that cannot be replicated by relationships with intensivists like me.

Albert Camus (Stanford Encyclopedia of Philosophy)

The moon missions generated millions of pieces of information, when you add up photos, files, and people; the shooting of JFK generated thousands of police and court files, and today an almost infinite bank of data is available with Coronavirus. Events which have spawned large numbers of files or data or reports are far more susceptible to CTs.

The Pros and Cons of Modern Medicine

Ways of embodiment change with age, and this is also the reason persons modulate or change the preferred life projects from which they derive their core life-narrative values. The patient-practitioner relationship is not always sufficient for recovery. For many patients, the best hope of recovery will come from a therapeutic engagement with a trusted clinician, complemented by judicious use of medicines, support from loved ones, and engagement in personally meaningful activities.

He met pain and physical decline with 600-calorie workouts; he discarded anxieties somewhere along innumerable running trails; he faced death by running through life at full stride. In this way phenomenology may assist and contribute to the analysis of medical ethical dilemmas associated with end of life suffering within the domains of health care and within society as a whole.

The results provoke and make this book one of the few that may change how we see the world, and how we think. The near-unbelievable way our bodies are intricately designed, the way the laws of the universe are finely tuned, the beauty of the world, and so on, all point to his existence. Terrence Holt, a geriatric specialist at the University of North Carolina at Chapel Hill, describes the situation in Internal Medicine, fictional fables based on his residency: Any patient in a hospital, when we take their clothes away and lay them in a bed, starts to lose identity; after a few days, they all start to merge into a single passive body, distinguishable ... only by the illnesses that brought them there.

Albert Camus (Stanford Encyclopedia of Philosophy)

Ethics Issues Raised by Human Enhancement

I was met by masked friends As I came into the building I was welcomed by masked friends - again this was so strange. EXTRACT 1 Chapter 1 Brother, Can You Spare a Dime? As a result, patients have been subjected to a range of ineffective and inhumane procedures: insulin comas, orgone therapy, and frontal lobotomies to name just a few Lieberman 2015, Shrink.
