As far as a wet holder goes, the best approach is to place the film on the bottom of the glass, so that the camera doesn't have to shine through the glass. Let me explain: This is a shot of a ferry boat that shuttles between the german isle of Sylt and the danish isle of Rømø.

The Mirror of Literature, Issue 550.

A few years back, the colony was almost entirely dependent on New York, for supplies of leather. Our first inquiries naturally enough relate to the tenants of our own species; we then ask what description of quadrupeds are found over its plains, and how far they enlarge or circumscribe the enjoyments and liberty of sovereign man; the birds that warble in its groves, the insects that flutter in its breeze, the fish that tenant its seas, rivers, and lakes, and the plants that wave in wild luxuriance on its hills and dales; and by comparing all these varieties with the natural characteristics of our own country, and contrasting their differences with others, we are enabled, in some degree, to appreciate, by the linked gradations, the order and harmony that reign throughout nature—the minute beauty of parts which are so essential to the perfection of the grand whole. The optics are designed with a depth of focus to accomodate any variations in the film surface that isn't removed by the holder.

ISO 9000

I want to use them. A failure on HRM's part to recognize this opportunity and act on it may result in the loss of TQM implementation responsibilities to other departments with less expertise in training and development. Regarding Silverfast slow post-processing times.

Does a company need a TQS to compete ?

If you have a lot of negatives then the Epson is much quicker because the holders take twice the amount of film.

ISO 9000

Perhaps I should have mentioned that. It fails to be consistent for the same reason auto white balance fails. Also, I thought I remember reading somewhere that either Vuescan or Nikon Scan attempts to remove the orange mask by reading the edge of the frame unexposed negative.
