Scientology: Its Cosmology, Anthropology, System of Ethics and Methodologies

Without going into excessive detail of specific proposals, a common theme of many quantum cosmologies is that they postulate a probability distribution over universes themselves. But the science on nature, theology, philosophy of nature, ethics and aesthetics connected with nature, depend on system of laws of this or that world, but the science on the cosmological vacuum is connected with comprehension of the fundamental substance, which is the basis of all possible worlds, therefore it must be the united and the highest science for reasonable beings of all worlds. The universe is motivated by a dynamic urge which is a force at the service of survival, the very principle of existence.

Scientology: Its Cosmology, Anthropology, System of Ethics and Methodologies

Could this mean that the world was not itself ordered causally, the situation instead being that our unconscious minds were super-genii regulating everything we fancied we saw, to ensure that it all obeyed the laws of nature quantum electrodynamics, general relativity, or whatever? Galaxies, stars, and planets like Earth on which intelligent forms of life may develop will be created anew in each universe. Here we will briefly introduce some of the central concepts of the SM to provide the minimal background needed for the ensuing discussion. In the standard FLRW models, the perturbations have to be coherent on scales much larger than the Hubble radius at early times.

The strongest case for accepting the SM rests on the evidence in favor of the underlying physics, in concert with the overdetermination of cosmological parameters.
