Novel Bayesian Adaptive Designs for Early Phase Oncology Clinical Trials

The synergy of combining semiconductor quantum dots and NIR absorbing dye provides new opportunities to harvest photons from different regions of the solar spectrum. The low energetic barrier for crystal formation has mixed consequences.

Pharmacogenetic Resources: PharmGKB and Clinical Pharmacogenetics Implementation Consortium

Elucidation of the hole transfer mechanism from Sb 2S 3 to CuSCN represents a significant step toward understanding charge separation in Sb 2S 3 solar cells, and provides insight into the design of new architectures for higher efficiency devices. See our full list of publications on Google Scholar: Publications since at UCSB 2019 233.

Electrocatalytic activity of mesoscopic TiO₂ films towards the reduction of CO₂ is probed by depositing a nanostructured film on a glassy carbon electrode. In this review, we assess the known effects of halide segregation on the structural and optical properties of mixed halide materials, discuss ongoing research to suppress the phenomenon, and provide a mechanistic overview of its underlying origins.

All Publications

The excited-state behavior of 2D perovskites discussed in this study shows the need to modulate the layer dimensionality to obtain desired optoelectronic properties. However, a recombination channel opens when both oxides are simultaneously excited, evidenced by a shorter lifetime of trapped holes in BiVO₄. Mesoscopic TiO₂ films modified with gold clusters deliver stable photocurrent of 3.

The eyes as a window to improved understanding of the prenatal effects of Zika virus infection.

Under water and applied potential conditions, CoO OH is formed, enriching the surface of Co₃O₄ nanoparticles with subnanometer thickness, and oxidizing H₂O into O₂.

Kajian teknologi High Altitude Platform (HAP) [Study of High Altitude Platform (HAP) technology]

Films obtained from the deposition of solutions containing lead halides and the CH₃NH₃⁺ organic cation is known to yield the CH₃NH₃PbI₃ perovskite structure upon annealing. Bazan, Thuc-Quyen Nguyen, Akshay Rao, Richard H.
