Molecular and antigenic heterogeneity of the rat leukocyte

Primary structure of human fibronectin: differential splicing may generate at least 10 polypeptides from a single gene. Like other B-lymphocytes, marginal zone B-lymphocytes recognize micro-organisms with special receptors on their surface, the immunoglobulins also called antibodies. One antibody bound to B cells only MRC OX-33 and precipitated a subfraction of B cell L-CA.

The extra segments of sequence in rat leucocyte common antigen (L)

Proc Natl Acad Sci U S A. Selected References These references are in PubMed. Ly antigens as markers for functionally distinct subpopulations of thymus-derived lymphocytes of the mouse.

Lymphocyte abnormalities in the BB rat

Isolation of biologically active ribonucleic acid from sources enriched in ribonuclease.

LYMPHOCYTE STRUCTURAL HETEROGENEITY IN THE LIZARD, CHALCIDES OCELLATUS

This thesis we studied the type of B-lymphocytes in the marginal zone of the rat.

Molecular and antigenic heterogeneity of the rat leukocyte

Full text Full text is available as a scanned copy of the original print version. Polyclonal activation: suppressor and helper activities are inherent properties of distinct T-cell subclasses. Like other lymphoid organs, the spleen is compartmentalized.
