Legha SS, Ring S, Bedikian AY, et al: Combined biochemotherapy in the treatment of advanced melanoma, in Program and Abstracts: Advances in the Biology and Clinical Management of Melanoma, pp 32â33 abstract. Malignant Melanoma

Recent studies show that acral melanomas have distinct molecular defects at regions 11q13, 22q11—13, and 5p15. There is also an increased frequency of loss of heterozygosity in 6q, and it has been proposed that this locus contains another tumor suppressor gene for melanoma.

Malignant Melanoma: Skin Cancer

Staging is based on tumor thickness Breslow's measurement and histologic level of invasion Clark level.

Diagnosis and Management of Malignant Melanoma

The role of prophylactic or elective lymph-node dissection in the management of primary malignant melanoma is controversial. The thicker the primary tumour, the less chance there is of patient survival. Jacquillat C, Khayat D, Banzet P, et al: Final report of the French multicenter phase II

study of the nitrosourea fotemustine in 153 evaluable patients with disseminated malignant melanoma including patients with cerebral metastases.

Malignant Melanoma

As new treatments are needed for this cancer, the scientists chose to explore the options available. The issue of whether one isolated, slightly atypical or dysplastic nevus is a clinical marker for an increased risk of melanoma is controversial. Such melanomas are invasive soon after their appearance, but when controlling for depth of the melanoma, the prognosis is the same as for other lesions.
