## References

Most tests use seawater, and lethality is the usual toxicity re- spouse.

### Chronic sublethal effects of the water soluble fractions of no. 2 fuel oils on the marine isopod, *Sphaeroma quadridentatum*

Toxicity of four oil dispersants to some animals from the Baltic Sea. Variable sensitivity of early life stages to dispersants could be related to species-dependent variability in egg permeability Georges-Ares and Clark, 2000. Effects of three oil spill dispersants on marine bacterial populations.

### Chronic sublethal effects of the water soluble fractions of no. 2 fuel oils on the marine isopod, *Sphaeroma quadridentatum*

Currently, acute and chronic bioassays are conducted with the CBA alone and with CBA that has been diluted with the water soluble fraction WSF of a crude oil. Field experiments with oils and emulsifiers.
