Natural History Marine Animals

On the contrary, in the Star-fishes the ambulacral rows are protected on either side by a row of the so-called interambulacral plates, through which no suckers pass. The species bears distally tapering pinnule combs composed of non-confluent, knob-like teeth similar to those of species belonging to the Indo-western Pacific genera Anneissia Summers et al.

Catalog Record: Seaside studies in natural history

IT is perhaps not strange that the Radiates, a type of animals whose home is in the sea, many of whom are so diminutive in size, and so light and evanescent in substance, that they are hardly to be distinguished from the element in which they live, should have been among the last to attract the attention of naturalists. Agassiz ISBN 13: 9780548973660 ISBN 10: 0548973660 Hardcover;Kessinger Publishing Llc; No Results Found
