## Predictors of resignation and sick leave after cancer diagnosis among Japanese breast cancer survivors: a cross

Results Clinicians described approaches they used to address the PCC domains of fostering a healing relationship, exchanging information, and addressing emotions, but do not appear to be addressing the domains of managing uncertainty, involving women in making decisions, or enabling self-management.

## Personalized Cancer Vaccines: Clinical Landscape, Challenges, and Opportunities

The investigation study using a questionnaire about the employment of Japanese breast cancer patients. © Nancy L Atkinson, Holly A Massett, Christy Mylks, Bethany Hanna, Mary Jo Deering, Bradford W Hesse.

## Cancer Survivorship in the USA: Challenges and Opportunities

The opportunity to examine these cancer-related interfaces in the context of a chronic disease model may offer opportunities to translate conceptual work done in other chronic diseases to cancer care processes as a means of improving research designs in this area.

## Personalized Cancer Vaccines: Clinical Landscape, Challenges, and Opportunities

Wireless substitution: early release of estimates from the National Health Interview Survey, July—December 2007. There are also a Chinese Medicine Centre and a day chemotherapy centre providing joint consultation service for cancer patients by an oncologist and a Chinese Medicine practitioner. J Surg Oncol 93 7 : 571-7, 2006.

## Cancer Survivorship in the USA: Challenges and Opportunities

Section Design and Functionality Issues Illustrative Quotes Home Page Emphasis on registration on the home page was off-putting. Int J Psychiatry Med 7 1 :1-15, 1976-77.

### **Correcting a decade of negative news about mammography**

Feuerstein M, Todd BL, Moskowitz MC, Bruns GL, Stoler MR, Nassif T, Yu X. In addition to her ASCO involvement, Dr. Qualitative research can be used to further examine user reactions.

### **Living Beyond Cancer: Survivorship Research**

Translational research would also enable exploration of how clinical trial matching systems could best be integrated into different settings, especially medical facilities and the home. Survivors at risk of experiencing high levels of fear of recurrence included women survivors, individuals younger than 59 years, those at 5 to 7 years postdiagnosis, the socially isolated, those with lower education levels, and individuals with a history of metastases or recurrence.
